

Encevo has been awarded "Deal of the Year" for issuing the largest Green Schuldschein 2018

In alignment with Encevo's strategy and sustainability vision, the company has issued in 2018 a Green Schuldschein of EUR 250 million to finance and refinance projects in the field of either renewable energy, energy transmission, distribution & smart grid, sustainable real estate or clean transportation solutions. All of these projects contribute to the group's overall sustainability strategy and Luxembourg's sustainability strategy related to GHG emissions reduction, renewable energy and improvements in the efficiency of energy infrastructure.

At the mtn-i award in London on February 7, 2019, Encevo has been awarded "Deal of the Year" for issuing the largest Green Schuldschein 2018. Encevo's Deal of the Year recognizes the SSD (« *Schuldscheindarlehen* ») market's embrace of the green bond theme.

The goal of mtn-i's awards has always been to recognise where the MTN (« *Mid-Term Note* ») market has created most value for issuers, dealers and investors as it keeps adapting and evolving solutions that meet their needs.
